Subject: RE: Sunnyside GW- Low Flow Sampling

Paula,

There has been a slight change in our schedule.

We will be conducting low flow surface water and pore water sampling the week of September 14, but the groundwater sampling has been delayed to the week of September 21.

The reason for the delay is that we have completed far more drill holes as monitor wells than we initially planned. This has added time to the drilling schedule. As of yesterday, we have drilled 15 holes and 14 have been completed as monitor wells. Additionally, the yields from the wells have generally been very low, and we would like to let them sit as long as possible before sampling.

I hope that Ian will be able to meet with our people and observe our activities.

It would probably be best for Ian to coordinate field activities directly with Brian Hansen of Formation Environmental, who is copied on this e-mail.

As always, if you have questions or require further information, please don't hesitate to let me know.

Thanks,

Pat

Subject: Sunnyside GW- Low Flow Sampling

Pat – I wanted to confirm Sunnyside's plans to conduct low flow and GW sampling the week of September 14th. Ian Bowen, EPA Hydrogeologist would like to plan on observing the sampling and collecting some splits. I have copied Ian on this email and would ask that you coordinate your schedule with Ian directly since I won't be available after Sept. 11th for a couple of weeks.

If you have any questions, please let me know. Thank you.

Paula Schmittiel
